This document describes the following products:

- P66.X30S  P66.X30K
- P66.XY30S  P66.XY30K
- P66.XYZ30S  P66.XYZ30K
Thank you for choosing Coremorrow’s products!
This user manual is applicable to P66 series piezo nanopositioning stage. For your smooth and correct use of this product, please read this manual carefully before use. Please follow the instructions in the manual installation and use procedures. Improper operation may cause injury to the operator or damage to the product. Therefore, the entire installation and operation process should be completed by a professional with a certain foundation and understanding of the product principle, or under the guidance of a professional.
If the product is disassembled or modified without permission, our company will not be responsible for any consequences arising therefrom.
It is illegal to change the product model and other false sales of our products. Users are advised to be vigilant. Once you find out or be deceived, contact us directly, we will crack down on illegal activities and prevent deception and economic losses. Coremorrow will certainly investigate legal responsibility of the illegal subject and related parties.
With the continuous development and innovation of technology, we will add the latest information to the manual as needed without notice. Please contact us if you need any information.

1. Introduction

1.1 Purpose and content

- The manual is mainly for your smooth and correct use of piezo stage.
- The manual contains all necessary information for P66 series piezo stage.
- The manual describes the precautions during installation and use.

1.2 Symbol and meaning

- **DANGER:** Improper handling may cause injury to the operator.
- **Attention:** Improper handling can cause damage to the equipment.
- No order between items.

1.3 Expected reader

The manual default user has knowledge of piezo stages and controllers, and has a basis for its installation and use.

1.4 Manual lost replacement

If the manual is accidentally lost, please contact our customer service department, we will send you the latest version of user manual.
In order to prevent damage to the product caused by improper operation, please pay attention to following points when using:

- P66 piezo stage is used as much as possible in dust-free, oil-free, lubricant-free environments;
- Since the product adopts flexible structure design, it is recommended that the load not exceed the bearing capacity of the product. Pay attention to the torque when loading. Do not twist or twist the load surface to avoid damage to the structure;
- Recommended voltage 0~120V for long-term operation to extend lifetime;
- Do not disassemble the product to avoid product damage;
- Avoid stretching and bending the cable interface to prevent damage to the cable;
- Please use the dedicated cable provided by us to connect the piezo stage and piezo controller;
- Please do not use cable extension wire, if need longer cable, please contact us.
3. Product Overview

3.1 Product Introduction

P66 series piezo nanopositioning stage has the following advantages:

- **High performance piezo stack:**
  P66 piezo stage is driven by high-performance piezo stack. The piezo stage is fully insulated, so its performance and service life are far superior to those of conventional stage. The insulating layer could effectively prevent the piezo stack from being damaged by moisture. The stability of piezo stack could be ensured under extreme conditions. The piezo stage has the characteristics of no rebound, no wear.

- **Flexible hinge structure:**
  P66 adopts flexible hinge mechanism, which has the advantages of no friction and high positioning accuracy. The flexible hinge is a component that is not affected by static and dynamic friction. It is based on the elastic deformation of solid (such as steel) and has no rolling and sliding parts. With high stiffness and load carrying capacity, the hinge guides are maintenance-free and wear-free. Suitable for a wide range of temperatures without the need for lubricants.

- **SGS sensor:**
  SGS sensor detects position information by expanding, they are fixed at appropriate positions in transmission portion, and the displacement is measured.

P66 piezo stage could travel up to 30µm, which could realize three-axes motion at the same time. It adopts flexible hinge mechanism to ensure XYZ three-axes motion without coupling, with no mechanical friction, fast response speed and repeated positioning accuracy. It could also be customized according to the requirements, with high flexibility and easy operation to meet different applications.

P66 is mainly used in biotechnology, interferometry, quality inspection, optical detection, nanopositioning, microscopy and imaging, image processing and other fields, and has very good development prospects.
3.2 Product Features

- Quick response time;
- Closed-loop SGS sensor with high positioning accuracy;
- Mainly used for high frequency.

3.3 Motion direction

![P66.X](image1)

![P66.XY](image2)

![P66.XYZ](image3)

Figure 1. P66 piezo nanopositioning stage motion direction
4. Operating environment

- Operating temperature: -20~80°C
- Environment free of dust, clean, and non-corrosive substances
- Relative humidity: <60%
- Recommended voltage between 0 and 120V for long-term and high-reliability operation.

5. Installation and operation

Before installation, first check the safety, such as whether the cable is damaged or broken, and whether the power supply has grounding protection.

5.1 Installation and connection

1. Ensure that the installation plane is flat;
2. Secure the piezo stage with M3 screws and tighten;
3. Connection grounding protection, as shown in figure 2;

4. Install the load and tighten properly to ensure positioning accuracy;

5. Connect the cable to the corresponding interface of the controller according to the connector head;

P66 installation diagram is as follows:
5.2 Load

When installing the load, ensure that the load mass is less than the max load of the P66, and install the load as much as possible at the center of the moving surface. The correct placement of the load is shown below:

![Figure 5 Load applied to the center of the stage](image)

For protection, we don’t recommend the load is too high. If it is used a higher load, please reduce the position center of the load gravity. The error placement method is as follows:

![Figure 6 Try not to let the load center of gravity exceed the stage](image)

It is forbidden to load the load on one side of the piezo stage, which would cause serious damage to the product, as shown in the following figure:

![Figure 7 Do not load longer loads and add to the side of the piezo stage](image)
If the screws used in tightening and connecting are too long, the screws will not be installed or some of screws will leak out, which will scratch the stage and affect the motion accuracy. If the screws are too short, the connection will not be compact and easy to loosen. Looseness could damage the internal structure of the stage. We recommend using the connection method shown below:

![Correct connection](image)

Figure 8 Correct connection

Please do not connect as shown below:

![Incorrect connection](image)

Figure 9 Incorrect connection
Note:

- Slowly tighten the load when installing it, and the torque should not be too large to avoid damage to mechanism;
- Avoid stretching and bending cables;
- Please connect P66 piezo nanopositioning stage and controller with special cable provided by CoreMorrow;
- Please do not extend the cable without authorization, please contact us if you need a longer cable.

5.3 Operating

Please confirm the following information before starting the power supply:

- P66 piezo nanopositioning stage has been grounded;
- The environment meets requirements of P66 working environment;
- The fixing screws must be tightened;

The above information is determined to perform controller related operations:
1. Please carefully read piezo controller user manual before operating, then start the controller;
2. Set the piezo controller to zero;
3. After checking for no abnormalities, input voltage values according to requirements (keyboard or analog control);
4. It could work normally within the rated voltage range of piezo ceramic (0~120V, max not exceeding 150V);
5. Please set the piezo controller to zero after used.

Please do not touch the product during the operation, avoid affecting the piezo stage performance or even damage the piezo stage.

The resolution of piezo ceramic is not limited. It depends on the performance of piezo controller. In order to better achieve the motion accuracy, it is recommended to use CoreMorrow piezo controller. For the operation of piezo controller, please refer to piezo controller usual manual.
Note:

- Please do not remove the grounding protection during operation. If it needs to be temporarily removed, reconnect the grounding protection before starting again.
- Drive voltage should not exceed 150V;
- If abnormal noise or oscillation occurs during operating, immediately turn off the power check parameter setting.

6. Transportation and inspection

6.1 Transportation

Piezo stage is packed in carton. The transportation is carried out under the condition of packaging. This product can be transported by various means of transportation under normal conditions. During transportation, it should avoid direct rain and snow, avoid contact with corrosive substances, and avoid strong collision, try to avoid improper behavior such as squeezing, irregular placement.

6.2 Unpacking inspection

Please check below information:

- Before opening the package, please carefully check the packaging for damage, bruising, wetting, moisture, deformation, etc.;
- Please check the parts on a case-by-case basis based on the supply contract and the packing list;
- Whether there is obvious damage on the surface of the product;
- Whether the product identification is clear and complete;
- Whether the connector is loose, the connection line is broken or not, etc.;

If any of the above occurs, please make a detailed record and take a photo, and please contact us immediately.

Precautions:

- Please handle gently when unpacking to avoid permanent damage to the stage.
7. Maintenance and processing

7.1 Problem Processing

Common problems are shown in the following table:

<table>
<thead>
<tr>
<th>Problem Description</th>
<th>Possible reasons</th>
<th>Solutions</th>
</tr>
</thead>
<tbody>
<tr>
<td>No displacement or displacement becomes smaller</td>
<td>The cable is not connected correctly or is in faulty contact.</td>
<td>Check the cable connection</td>
</tr>
<tr>
<td></td>
<td>Excessive load</td>
<td>Loaded by product max load</td>
</tr>
<tr>
<td></td>
<td>Sensor zero drift</td>
<td>Calibrate the sensor</td>
</tr>
<tr>
<td>Reduced accuracy</td>
<td>The installation base is uneven</td>
<td>Mount the stage on flat surface</td>
</tr>
<tr>
<td></td>
<td>Loose connection</td>
<td>Fastening connection</td>
</tr>
<tr>
<td></td>
<td>Wiring is wrong</td>
<td>Check the wiring is correct</td>
</tr>
<tr>
<td>Vibration or inaccurate positioning at start-up</td>
<td>The parameters are incorrect.</td>
<td>Stop immediately, check the parameter settings</td>
</tr>
<tr>
<td></td>
<td>Resonance</td>
<td>operating frequency less than the resonant frequency</td>
</tr>
</tbody>
</table>

Table2 Common problems and solutions
If the user has problems that could not be solved. Please record the fault situation and contact with us. The professional technical engineer would help solve the problem. Problems caused by improper operation are not covered by the warranty; CoreMorrow is not responsible for any problems caused by dismantling the peizo stage without permission.

7.2 Daily maintenance

If the piezo stage is not used for a long time, please store it in an room environment with no dust, good ventilation, clean and non-corrosive substances. Please do not loosen the screws on the stage structure, avoiding to affect the accuracy of the stage.

Daily cleaning:

Please disconnect the piezo stage to controller, then clean the surface of it. When cleaning, first wipe a small amount of detergent with a towel and gently wipe the surface of the piezo stage, then wash it with alcohol. Please do not use ultrasonic waves for cleaning. When cleaning the surface, try not to pick up the product. If it is necessary to pick up, please place a sponge under the piezo stage for protection, the piezo stage should not be too high from the sponge to prevent the piezo stage from falling off.
8.1 Technical data

9. Customer Service

If you have questions about the products you are currently using, please let us know the following information:

- Piezo stage model number and related number
- Controller model for this product
- Software driver version for this product
- Computer operating system for installing supporting software
