# **P92 Fast Tool Positioning Stages**

Two models of displacement (30µm or 75µm) about P92 are optional, and the corresponding models are P93.X30 and P93. X70. P92.X70 has 2 fixed points, in side or moving surface.

#### Features

• Ultra high precision

Large load capacity

Quick response time

• High stiffness

### Dust and Droplet Proof On Request

### High Stiffness

The stage body material is made of stainless steel to ensure the stability during processing, the structure is stable and reliable, and the machining accuracy is not affected by the vibration.

The stiffness of the fast tool positioning stage is much greater than the conventional piezo nanopositioning stage.

### Sensor

P92 could be optionally equipped with SGS sensor, LVDT sensor or CAP sensor to eliminate the hysteresis and creep of piezo actuator, input control voltage is linear with output displacement.

#### Closed Loop Curve

#### Open Loop Curve

# Step Time

The step time with load of P92.X70C is about 12ms. Matching different controllers would be different step times. The required step time could also be set before shipping.

Note: Max driving voltage could be -20V~150V, Recommended voltage 0~120V for long-term operation to extend lifetime.

Technical data are measured by CoreMorrow E00/E01 series piezo controller.
